

We present to you: An automated sample detection, magnification, measurement and Artificial Intelligence ready Sample Detection

With **KSI Automated Sample Detection** in combination with our new sample stage setup times four ultrasonic inspections gets fast and easy, saving time and costs. The operator simply places the sample on the stage and can start the evaluation with only one click.

The **KSI AUTOMATED Sample Detection** (available for all new KSI Scanning Acoustic Microscopes and as retrofit) detects, magnifies and measures any samples. Automatically sets the scan field size.

KSI AUTOMATED Sample Detection provides:

- ✓ Fast, reliable and automated sample detection
- ✓ Sample size measuring
- ✓ Automated setup of the scan field size and scanner positioning
- ✓ Artificial Intelligence Ready
